

Pitch Deck Presentation

Reflex Delivery System

**Streamlined delivery for
small retailers**

Presented By:
Team Titans

Problem Statement

Challenges faced by the small retailer businesses

Retailers rely on WhatsApp/phone calls which is chaotic, and has no records

Dispatchers struggle to track requests and riders

Riders struggle to provide feedback to the dispatchers and retailers upon a completed delivery

Customers lack transparency on delivery status

Team Titans

The Solution

- Reflex: simple dashboards for Retailer, Dispatcher, and Rider
- Cloud-based backend with PostgreSQL database
- Real-time updates → request → assign → deliver

System Architecture

Frontend

Vercel-hosted dashboards (Retailer, Dispatcher, Rider)

Backend

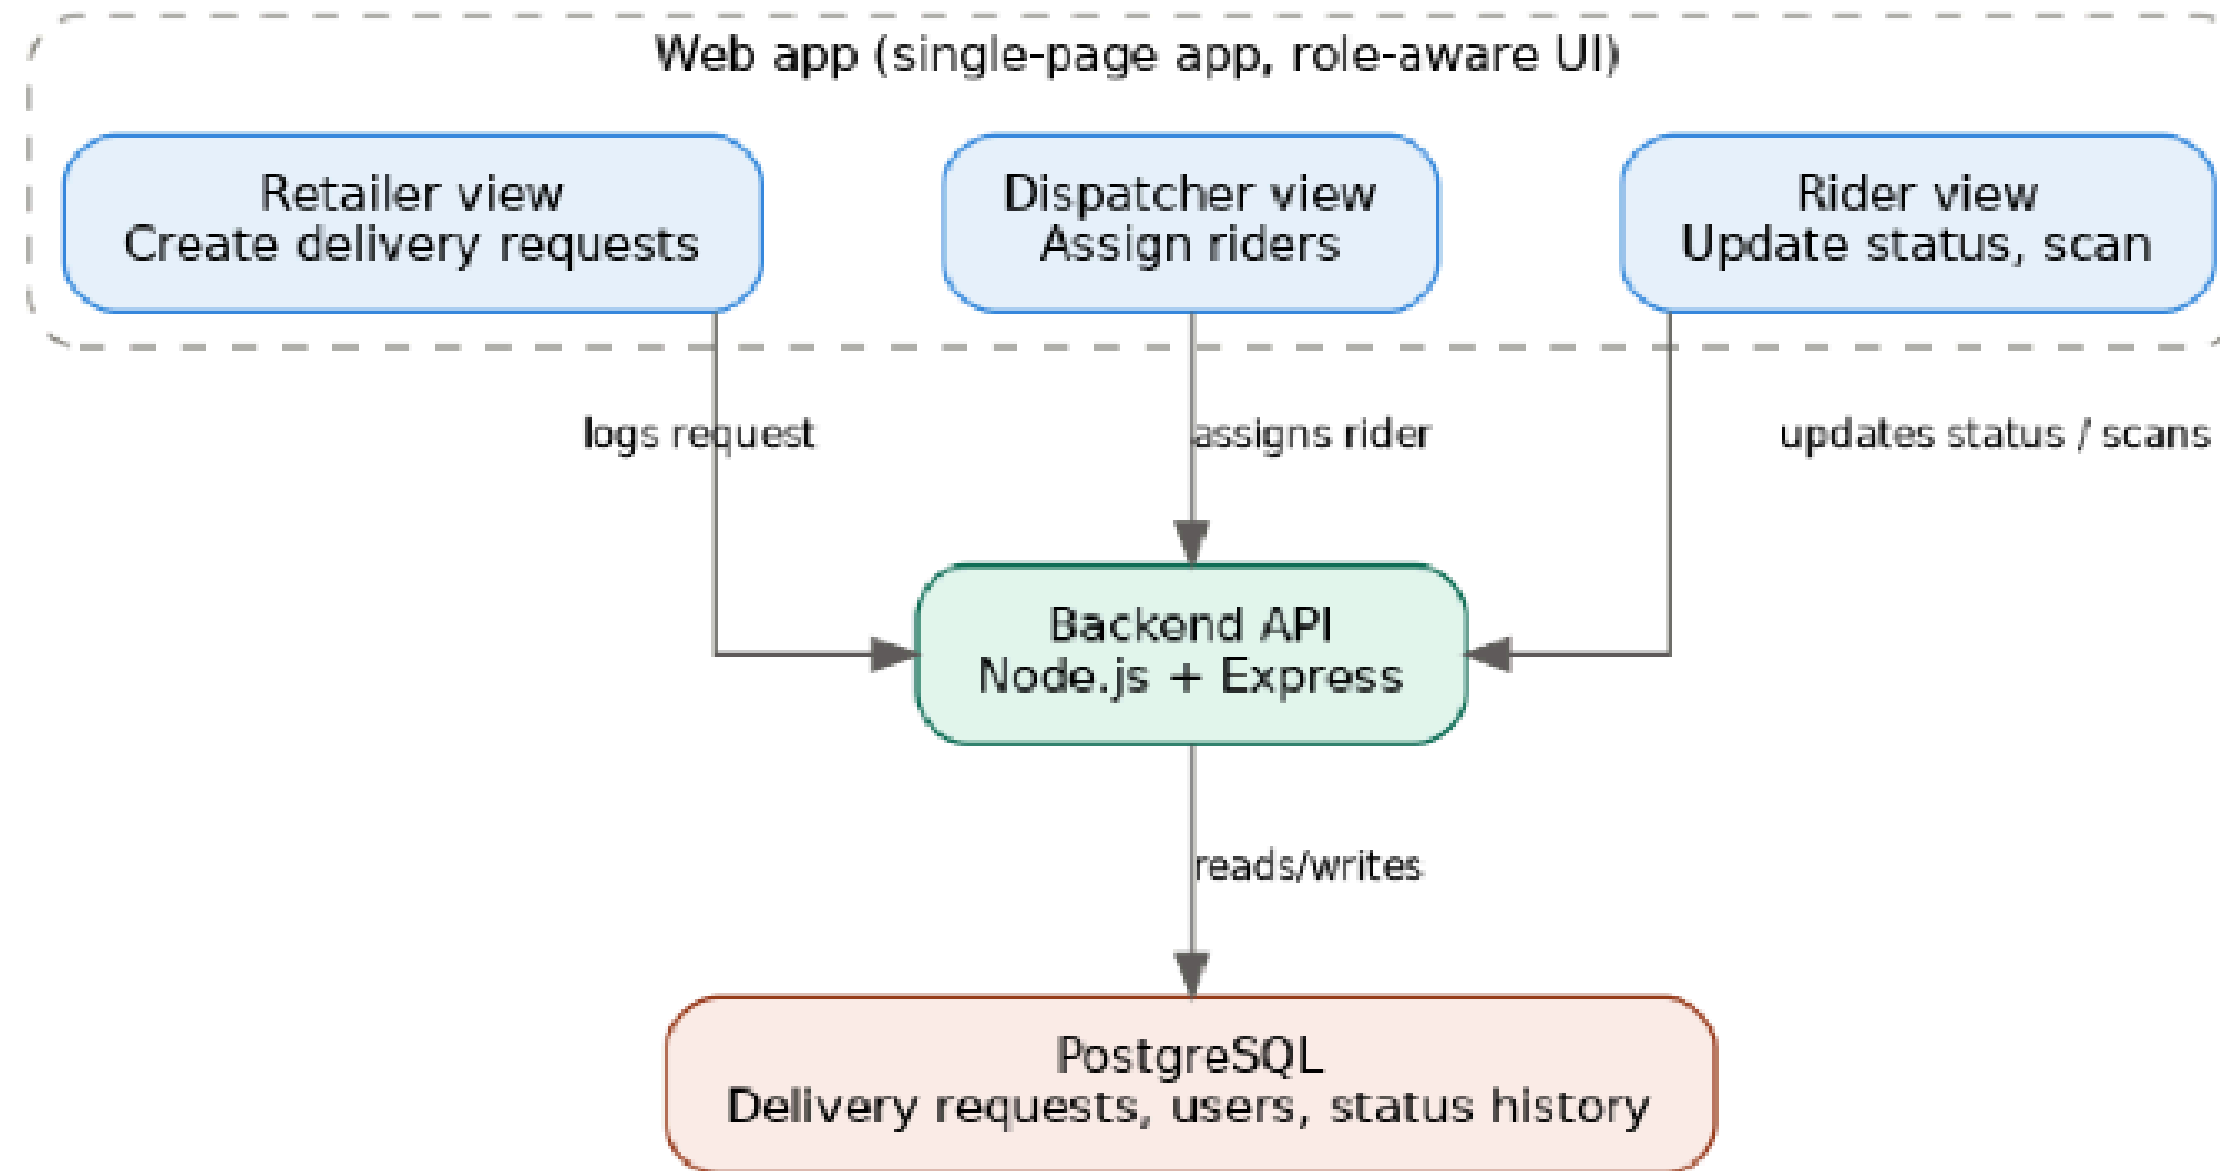

Render (Node.js + Express)

Database

PostgreSQL

System Architecture

Key Features

Retailer

Retailer logs requests digitally

Dispatcher

Dispatcher assigns riders with one click

Rider

Rider updates status (picked up /
Delivered)

Clients / Stakeholder

Transparent workflow for all stakeholders

Team Titans

Trade-offs

Limitation

1. Manual Rider Assignments
 - Weakness: The dispatcher assigns riders manually, with no auto-routing.
 - Accepted because: Keeps workflow simple and easy to demo in sprint.
 - Future Fix: Implement algorithmic assignment (nearest rider, load balancing).
2. No Authentication/Security Layer
 - Weakness: No login or role-based access control.
 - Accepted because: Faster to implement for prototype; focus on core workflow.
 - Future Fix: Add JWT authentication and RBAC for secure multi-role handling.
3. Single Database Instance
 - Weakness: One PostgreSQL instance, no replication or sharding.
 - Accepted because: Easier setup for pilot scale.
 - Future Fix: Add replication, backups, and scaling strategy for production.

Team Titans

Roadmap

Redefining the future

1. Short Term

- Add authentication (JWT login, role-based access).
- Implement audit logging for request and status changes.

2. Medium Term

- Automated rider assignment algorithm.
- Analytics dashboards for retailers and dispatchers.

3. Long Term

- Native mobile app with GPS tracking.
- Push notifications for delivery updates.
- Regional expansion and mobile money integration.

➔ Impact

Momentum

- Efficiency for retailers and dispatchers
- Transparency for customers
- Scalable model for Kenya's retailers and beyond
